

OPERATING REQUIREMENTS:

- 120 V, 60 Hz
- Shop air 20 - 80 psi (clean & dry)

CAUTION: HOT AIR WILL BURN!!!
Place tool in Pod when not in use

971HA
ATMOSCOPE®
SMD Hot Air Station

- Automatic air shut-off
- Easy to use flow regulator
- Modulator assembly
- Easily converted to contact soldering with NO-FUME system
- ESD safe
- Hot air calibration capability
- Check valve equipped high pressure hose

PR570 Flow Regulator

Measures flow in cubic ft per hour

Adjust flow by turning knob. Fully clockwise will shut off the flow.

PAS53 Pod Air Switch

(Tool Pod not shown)

With tool out of the pod, push in Tab to lock: Air on (continuous)

With tool in the pod, push in Tab to lock: Air off (disable)

CHANGING TIPS

1. Turn Tip counter-clockwise by using a **WT620** Tip Wrench.
2. Remove and replace with desired Tip.

use a 5/16 wrench to hold the sleeve if tip is too tight.

REWORKING SMDs

IMPORTANT

The 3 very important factors involved when working with the ATMOSCOPE SMD Hot Air Tool are *amount of air output, temperature setting and type of Tip used*. The key to an effective soldering is to reflow the solder **without blowing the solder** across the board and thus creating bridges.

The following techniques are based on the manufacturer's point of view and should only serve as guidelines. Its effectiveness will depend on practice.

DON'T!

FOR RESISTORS, CAPACITORS, TRANSISTORS AND ALIKE.

1. Have the proper Tip installed.
2. Adjust air output to about 2-4 scfh.
3. Set temperature between 700°F to 800°F.
4. Heat up the joints until the solder melts.
5. Remove by using a pair of tweezers.
6. To resolder, hold SMD in place making sure leads are aligned with solder pads.
7. Direct hot air flow to the connection until solder reflows. Release SMD when solder solidifies.

tweezers

Turbo Tip

Dual Flow Tip

FOR GULLWINGS, LEADLESS CHIP CARRIERS and QUAD I.C.s METHOD 1

1. Install the proper Tip.
2. Adjust air output to 2-4 scfh.
3. Set temperature to 700°F.
4. Using a **WS630** SMD Pull Wire, thread the pullwire under the leads of one side of the SMD and again thread the wire under the leads of the opposite side.
5. Anchor one end of the Pull Wire to an unused hole of the circuit board or maybe tape it securely to the board.
6. While directing hot air to the leads of the first side, pull the wire so that it will cut thru the solder connection.
7. After removing the two opposing side follow the same procedure to desolder the remaining sides.
8. To resolder, use a tweezer to hold SMD in place and align the leads with the pads.
9. Use a Fan Tip whose width is as close to the size of the SMD leads as possible.
10. Direct hot air on the leads and allow solder to reflow. Release SMD when solder solidifies.

WS630

Fan Tip

METHOD 2

1. Have the proper Tip installed.
2. Adjust air output to about 2-4 scfh.
3. Set temperature to 700°F.
4. Heat up one corner of the SMD.
5. When the solder melts, insert the shimblade of SMD helper under the heated area of the chip as if cutting thru the solder connection.
6. While directing hot air ahead of the shim at all times, cut thru the sides of the SMD and lift it up from the board.
7. To resolder, use a Quadra-Flow Tip.

USING QUADRA-FLOW TIPS (RECOMMENDED FOR FOUR SIDE LEADED COMPONENTS)

Quadra flow Tips come in a variety of sizes. Increase air output as you increase the size of the Tip.

1. Place Quadra-Flow Tips over the SMD.
2. After waiting for the solder to melt, twist tool gently to see if the SMD is freed.
3. Remove SMD by using a pair of tweezers.
4. To resolder, glue SMD to the board with the leads aligned with the pads.
5. Place Quadra-Flow Tip over SMD and allow solder to reflow.

Quadra-Flow Tips

create an "oven-like" condition around the SMD.

RN433 Retainer Nut

Use WT620 Tip Wrench to install Tips with RN432 or RN433

RN432

SMD Hot Air Tips

See Catalog for SMD Helpers, Pull Wires and other tools used in aiding SMD removal and placing.

Application	Description	Part No.	Hole Dia.	L	W
	Jet Tip for pin point air flow. 	LT427	.02 in. 1/64 in. (0.6 mm)	.38 in. 3/8 in. (9.5 mm)	—
	Short Jet Tip for medium air 	LT432	.04 in. 3/64 in. (0.9 mm)	.06 in. 1/16 in. (1.5 mm)	—
	Turbo Flow for large air flow. 	LT428	.06 in. 1/16 in. (1.5 mm)	.25 in. 1/4 in. (6.4 mm)	—
	Fan Tips use a wide air flow enough to cover one whole side of the SMD. 	LT426	—	.30 in. 5/16 in. (7.6mm)	.17 in. 3/16 in. (4.3 mm)
	LT434	—	.46 in. 15/32 in. (11.7 mm)	.23 in. 15/64 in. (5.7 mm)	
	LT435	—	.59 in. 19/32 in. (14.9 mm)	.35 in. 3/8 in. (8.9 mm)	
	LT436	—	.65 in. 21/32 in. (16.5 mm)	.43 in. 7/16 in. (10.8 mm)	
	Dual Flow Tips blow hot air on both sides of the SMD, not on the SMD. 	LT526	.03 in. 1/32 in. (0.8 mm)	.30 in. 5/16 in. (7.6 mm)	.12 in. 1/8 in. (3.2 mm)
	LT534	.05 in. 3/64 in. (1.2 mm)	.46 in. 15/32 in. (11.7 mm)	.20 in. 13/64 in. (5.1 mm)	
	LT535		.59 in. 19/32 in. (14.9 mm)	.28 in. 17/64 in. (7.0 mm)	
	LT536	.65 in. 21/32 in. (16.5 mm)	.35 in. 23/64 in. (8.9 mm)		

**Apply AN112 or AN122
ANTI-SEIZE COMPOUND**

To Heater and Area of Tip Contact.
AN122 comes in syringe dispenser.

27	PR570	Air Flow Regulator	1
28	SR439	Clip, Holder for Hose and Filter	1

HOT AIR CALIBRATION

It is highly recommended to use new or a very clean thermo-couple wires (never been use to calibrate soldering tips)

FOLLOW SET-UP AS ILLUSTRATED

1. With the Hot Air Tip inside the **TPL09-1**, place the center of the thermo-couple wire of the **SDS100** inside the slot of **TPL09-1** Locator.
2. Turn on power and set Temperature Control Knob to 400°F.
3. Turn Regulator Knob to 4 - 5 SCFH.
4. Adjust LO-Temp. Calibration Pot so the Meter will read 400°F.
5. Set Temperature Control Knob to 800°F.
6. Adjust Hi-Temp. Calibration Pot so the Meter will read 800°F.

OPTIONS

The 971HA can be converted to a contact soldering with No Fume system. Ask for the VS174 and RCS73. Remember to remove the LTA75H from the heater accumulator. (see spare parts list)

VS174 Vacuum pump and filter, shop air operated.

RCS73 Collar with fume extraction pipe

SPECIFICATIONS

- 120V, 70 W
- 0 to 20 SCFH flow meter
- Temperature range: 400°F - 800°F (205°C - 425°C)
- Temperature regulation: $\pm 6^\circ\text{F}$ ($\pm 3^\circ\text{C}$)
- Voltage leakage from tip to ground less than 2 MV
- Tip to ground resistance less than 2 ohm
- Complies with MIL-S-45743E, DOD-STD-2000-1B, MIL-STD-2000 WS6536E and ESD SPEC, DOD-STD-1686, DOD-HDBK-263.
- UL listed
